

» EMPLOYMENT

February 2014 – May 2014

Custom Software Developer | Amadeus Consulting

- Front End Development for many different client projects in an agency setting, mainly utilizing HTML5, Sass/CSS3, and JavaScript leveraging the Bootstrap framework and a ASP.NET MVC backend.
- UI/UX design (color comps, wire-framing, icon creation) to set the building blocks for a seamless customer experience, whether it be a mobile app or desktop site.
- Single-page web application development for a client using HTML5, Sass/CSS3, and Backbone.js, to work with their already existing backend and prior front-end development.
- Rebuilt an entire custom Wordpress site in 2 days in a huge effort to save the company a very lucrative digital marketing client.
- Troubleshooting and fixing of issues with a database-driven dynamic sizing site. The site was built with many different sized tiles, all which were based off screen resolutions, then calculated using custom Javascript written by a former employee. Many of the tiles would not resize, and no one was aware it was being defined in the database. I found the issues and corrected, and the site now sizes properly for any screen resolution.

December 2012 – November 2013

Web Developer II | Experian Consumer Direct

Solely responsible for the Accelerated Content ticket queue (tickets needing less than 40hrs of work) for a high-volume site utilizing many different site versions and product tiers. This queue was the first to use Agile Scrum in the whole company, and continues to do so with team members based in Denver and in the UK. Team started with 3 developers and has dropped down to just me, and I've maintained and elevated the throughput. Some examples of ticket work completed are: Site-wide logo change, site-version specific landing page redesigns, create back-end functionality to properly display .js files on specific pages, customer-specific overlays and fixing numerous css rendering issues.

August 2012–November 2012

Contract Web Developer

Tim Meehan-Web Designer

Responsible for any and all needs of clients, including site updates, database upkeep, new site development from PSD mock-ups and any client emergencies that arise.

2006-2012

Freelance Web Development & Internet Marketing

Teneo Talent (www.teneotalent.com)

Optimize and enhance website and user experience as needed, via a custom-made Wordpress template. Design and implement a log-in based message board and community for users. Create and execute a schedule for writing and releasing new content. Manage social media interactions, establishing a fun and professional voice across all platforms. Track conversions and ROI. Develop proper on site keywords, headers, and page titles.
